EDUCATION

- GD Goenka University — Gurugram,Haryana
  Btech CSE (AIML) — 2023 - 2027
  CGPA: 9.01

EXPERIENCE

- A3Logics — 9 June 2025 – 28 July2025
  Jaipur

Designed and developed interactive dashboards using Power BI to visualize business data effectively.
Cleaned, transformed, and analyzed raw datasets to generate meaningful insights.
Created detailed reports to support data-driven decision-making.
Worked with different data sources and performed data modeling for better performance.
Collaborated with team members to understand business requirements and deliver analytical solutions within deadlines.

- AI Intern — IBM (Internship Program by GD Goenka University) — May 2025 – August 2025

Developed a rule-based chatbot using Python to simulate human-like conversation and respond to user queries. Gurugram

Designed conversation flows and implemented intent-based responses for improved interaction.

Gained hands-on experience in Natural Language Processing (NLP) concepts and chatbot architecture.

Built another chatbot specifically for GD Goenka University enquiry system, designed to answer admission, courses, fee structure, and campus-related queries.

Improved bot response accuracy by refining logic and testing multiple user input scenarios. Learned practical implementation of AI concepts in real-world applications.

PERSONAL PROJECTS

- AI-Based Face Recognition Attendance System (For Rural Areas)

- Developed an AI-powered face recognition system to automate student attendance in rural schools with limited infrastructure.
- Implemented face detection and recognition algorithms to accurately identify students in real time.
- Designed the system to function efficiently in low-bandwidth and lowresource environments.
- Reduced manual attendance effort and improved accuracy of recordkeeping.

Tools & Technologies Used: Python, OpenCV, NumPy, Machine Learning, Haar Cascade / Face Recognition Algorithms

Output Achieved:

- Successfully detected and recognized student faces with high accuracy.
- Automated attendance recording, minimizing human error and saving administrative time.

- Student Placement Predictor

- Built a machine learning classification model to predict students' placement probability based on academic performance and skill-based parameters.
- Performed data cleaning, preprocessing, feature selection, and model training.
- Compared multiple algorithms to select the best-performing model. Tools & Technologies Used: Python, Pandas, NumPy, Scikit-learn, Matplotlib Output Achieved:
- Generated prediction results indicating placement likelihood.

- Improved model accuracy through tuning and validation techniques.
- Provided data-driven insights for identifying key factors influencing placements.

AI-Based Question Paper Generator

- Designed an AI-based system to automatically generate question papers based on selected subjects and difficulty levels.
- Implemented logic to ensure balanced question distribution across topics and cognitive levels.
- Structured the system to minimize repetition and maintain fairness.

Tools & Technologies Used: Python, NLP Concepts, Randomization Algorithms, Basic Machine Learning

Output Achieved:

- Automatically generated structured and balanced question papers.
- Reduced manual effort in paper setting.
- Enabled faster and more efficient examination preparation.

-Student Performance Prediction

- Developed a regression-based machine learning model to predict student marks based on study hours and academic inputs.
- Trained and evaluated the model using appropriate performance metrics.

Tools & Technologies Used: Python, Scikit-learn, Pandas, NumPy Output Achieved:

- Achieved reliable prediction accuracy.
- Demonstrated correlation between study patterns and academic performance.

TECHNICAL SKILLS AND INTEREST

Languages: C++, Python, SQL

Web Development: React.js, HTML5, CSS3, Node.js, REST APIs, MongoDB, MongoDB Atlas, MySQL, Render, Netlify, Git, GitHub

ML & Data: NumPy, Pandas, Scikit-learn, Matplotlib, Supervised Learning: Linear Regression, Logistic Regression, Decision Trees,

Random Forest, SVM; Unsupervised Learning: K-Means, PCA; Data preprocessing, feature engineering, model evaluation.

Coursework: Data Structures and Algorithms, OOPS, DBMS, OS, CN

Personal Competencies: Problem Solving, Analytical & Technical Skills, Teamwork, Communication

CERTIFICATIONS

- AWS Solution Architecture Job Simulation — Certificate of Completion

- GenAI Powered Data Analytics Job Simulation — Tata AI/ML Certifications —Alison

ACHIEVEMENTS

- Winner — IDP Project
- Published research paper on Plant Disease Detection using AI
- Participant — Smart India Hackathon (SIH), developed an application
- Participant – IBM ICE DAY 2026 (got in top 6)
